

# Closed System Camera Cover

One cover for every need

Medline's surgical camera covers provide a sterile barrier between cameras and their attachments in the surgical environment.

The Closed System Camera Cover improves the safety of both patients and staff. In addition, its unique adaptor concept, with a locking mechanism, makes it possible to safely and quickly change telescopes during surgical procedures.

## Main benefits vs. traditional sterile camera covers:

- Allows for quick telescope changes, saving time in the operating theatre
- Eliminates the need for several covers
- Prevents telescope rotation by way of a locking system
- Reduces the cost of camera system maintenance, cleaning and inventory

Two folding options are available.
