

**DISPOSABLE ALL-AROUND
PROTECTION.**

Protective Apparel
For Nursing and Research

Why are more healthcare professionals choosing Medline for their all-around protection?

Our products provide high protection and great comfort.

We know you rely on disposable apparel to keep your staff protected and comfortable. For this reason, we use the finest materials available for protection, offering the greatest level of comfort. We apply the highest quality standards to our products and in our manufacturing facilities.

Medline International France is EN ISO 13485: certified. Medline has been manufacturing protective apparel for over 40 years.

GUIDE TO PROTECTIVE MATERIALS

To help choose the right product, here is a brief description of the features and benefits of the main materials available at Medline. Refer back to this page as you look through the brochure.

Spunbond Polypropylene

The standard fabric for basic protective apparel; formed by bonding fibers together to form a single layer of breathable, woven-like material. Its main advantages are economy and comfort.

Multi-Ply Material (SMS)

This fabric consists of inner layers of meltblown polypropylene sandwiched between outer layers of spunbond polypropylene. Strong, fluid-resistant and breathable, this multi-layer material provides an optimal mix of protection and comfort.

Medium Weight Multi-Ply Protection and Comfort Levels

Coated Polypropylene

This fabric is created by coating soft, spunbond polypropylene with a layer of impervious polyethylene. This material is ideal for any situation demanding a high level of fluid protection. Available in medium weight and heavy weight materials.

Polyethylene

This single layer of polyethylene film provides high barrier properties at a very attractive price. This film is ideal for situations when impervious properties are needed.

Prevention Plus

This impervious and breathable material consists of a hybrid film laminated between two layers of bi-component spunbond material. This fabric is ideal for long interventions when impervious protection is needed.

Levels of Barrier Protection

European Directives and Norms to classify Protective apparel:

The products listed in the brochure are classified by the European regulation as PPE Category I - Minimum Protection according to the Directive 89/686/EEC or MDD class I non sterile according to the Directive 93/42/EEC. Please consult the Technical Data Sheet of the product in order to find how the product is classified.

Directive 93/42/EEC applies to medical devices and their accessories. Medical devices means any instrument, apparatus, appliance, software, material or other article, whether used alone or in combination, including the software intended by its manufacturer to be used specifically for diagnostic and/or therapeutic purposes and necessary for its proper application.

Directive 89/686/EEC commonly referred to as PPE (Personal Protective Equipment) details the conditions governing the placement and free movement within the European Community Market for the PPE goods and the safety requirements which PPE must satisfy in order to ensure the health protection and safety of users.

MEDLINE SINGLE USE SCRUB SUITS

Medline single use scrub suits are manufactured from breathable SMS material. The products are intended to be used by healthcare professionals in hospitals and clinics to maintain a high level of hygiene and contribute to infection control. Medline portfolio has two ranges of scrub suits the Advanced range and the Soft range. Both ranges are designed in collaboration with healthcare professionals.

Advanced Scrub suits

- Manufactured from 42 gsm SMS material with an optimal opacity and softness
- Low linting, with an antistatic treatment and non-biological fluid resistance
- Available in 7 sizes from XS to 3XL
- Available in: **blue, green** and **purple**
- Blue and green range is available with shirts and pants packed separately or in sets
- Purple range is available with shirts and pants packed separately
- Latex free

Soft Scrub suits

- Manufactured from 35 gsm SMS material with an optimal opacity and softness
- Low linting, with an antistatic treatment and fluid resistance
- Available in 7 sizes from XS to 3XL
- Available in **blue** and **green** colour
- Blue range is available with shirt and pants packed separately or in sets
- Green range is available with shirts and pants packed in sets
- Latex free

MEDLINE CLEAN AIR SUITS

Medline single use Clean Air Suit is a unique, innovative product that provides high comfort for healthcare professionals and increased safety for patients. Medline Clean Air Suits are specifically designed for use in hospitals and clinics to maintain a high level of hygiene and contribute to infection control. For more details about clean air suits please check the clean air suit brochure.

Contributes to Reducing Air Contamination in the Ward and Surgical Theatre

Medline Clean Air Suits comply with the EN 13795 standard. All the tests performed demonstrate how the Clean Air Suit contributes to reduce airborne particles and preserve a clean air and environment in the ward and surgical theatre.*

	EN 13795 Characteristic	Test Method	EN 13795 Clean air suits requirements	Test results**
Material test Performance*	Resistance to microbial penetration - Dry (CFU)	EN ISO 22612	≤300	0
	Cleanliness - Microbial (CFU/100cm ²)	EN ISO 11737-1	≤300	<9
	Cleanliness - Particulate matter (IPM)	EN ISO 9073-10	≤3,5	1,9
	Linting (Log10 (lint count))	EN ISO 9073-10	≤4,0	1,9

** Technical data are based on average.

Designed with Attention to Details

Medline Clean Air Suits have been designed in collaboration with healthcare professionals through multiple trials, adjustments and validations. This high attention to detail provides all features and benefits required by the intensive activities of the operating room staff.
