

# Liqui-Loc™ and Double-Sided Floor Pad for Fluid Management

To promote a clean and safe environment

**Absolute  
floor safety**

# Safety in the operating theatre

Working in wet environments means being exposed to hazards, including slips, trips and falls on a daily basis. In hospitals, this represents a risk for both the patient and healthcare staff. Wet floors in particular can compromise care and add additional challenges for healthcare facilities.

## These hazards, if not properly managed, can result in a number of problems:

- Staff or patient injury causing distraction or sickness-related absenteeism
- Disrupted surgical procedures as staff cannot fully focus on what matters
- Increased costs and time due to prolonged procedures and clean-up
- Infection and cross-contamination as fluids are not contained and disposed of correctly

## Risk environment:

Operating theatre and lab stations

Examination rooms

Scrub sink areas

Maternity wards

Central sterilisations

## A prevention plan that will help improve procedures and overcome associated challenges should include:

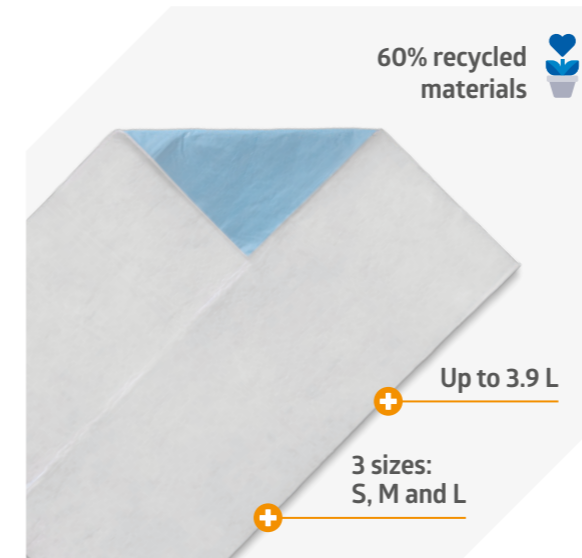

- Systematic reporting of fluids to be cleaned up
- The wearing of slip-resistant footwear
- **Guidelines for using fit-for-purpose products created specially for absorbing and holding fluids**

**With dedicated solutions,** hazards caused by spilled and bodily fluids can easily be tackled.

Medline's solution guarantees an instantly safe and clean work environment.

# Upgrade your level of safety

Medline's solution addresses both the hazard of falls and the need for quick fluid removal, with the commitment to improve safety in the work environment.

## Liqui-Loc Floor Mat

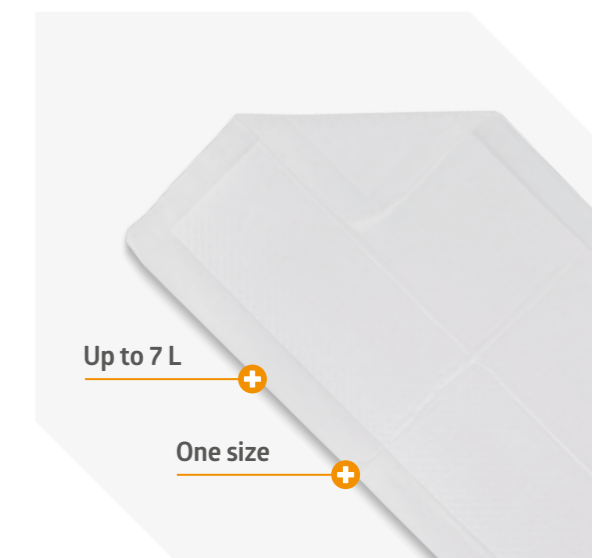

Can be placed under foot to manage spilt fluids

- **Impervious anti-slippery back**
- **Drip-safe**, locking fluids to avoid cross-contamination and complicated handling
- **Easy disposal** for hygiene and safety
- For:
  - standing and placing tools on
  - placing in staff-patient proximity areas (OR table, examination room, scrub sinks)
  - using where large volumes of fluid are generated (gynaecology, urology, arthroscopy)

## Double-Sided Floor Pad

Promote hygiene with a high-absorbency pad

- **Absorbs on both sides** to contain a higher volume of fluids
- **Drip-safe** and locks fluids in to avoid cross-contamination and to ease disposal
- **Speeds up the cleaning process** and absorbs fluid spills on the floor
- **Improves the overall level of hygiene**, which results in cost and time savings
- **Do not stand on**

**Together, Liqui-Loc Floor Mat and Double-Sided Floor Pad provide absolute floor safety.**

# Ordering information

## Liqui-Loc Floor Mats

The fall prevention solution

| Item code | Description        | Size            | Absorbency | Anti-slip | Packaging |
|-----------|--------------------|-----------------|------------|-----------|-----------|
| ORLLPBS   | Liqui-Loc - small  | 71.1 x 101.6 cm | 2.2 L      | Yes       | 13/cs     |
| ORLLPBM   | Liqui-Loc - medium | 71.1 x 142.2 cm | 3.0 L      | Yes       | 10/cs     |
| ORLLPBL   | Liqui-Loc - large  | 71.1 x 182.8 cm | 3.9 L      | Yes       | 8/cs      |

## Double-Sided Floor Pad

The solution for cleanliness and safety

| Item code | Description            | Size       | Absorbency | Anti-slip | Packaging |
