**PRECISE PRESSURE
MADE SIMPLE.**

Compass CVP for Sepsis Management

Assess your septic patients quickly

WITH SEPSIS, EVERY MINUTE COUNTS. COMPASS MEASURES CENTRAL VENOUS PRESSURE (CVP) INSTANTLY.

The damaging effects of sepsis in the United States are staggering.

- Every year, 1.6 million sepsis cases fill US hospitals.
- Every day, 700 deaths occur due to severe sepsis and septic shock.
- Every hour sepsis treatment is delayed, the risk of death increases 7.6%.

Approximately 50 – 60% of your septic patients are already getting a central line. Compass makes obtaining CVP fast, easy and affordable. Capillary assessments and cardiac ultrasounds require trained staff and produce variable results. Monitoring systems need transducer wire cabling to be set up, consuming valuable staff time.

Reclaim the lost minutes of the golden hour

Every hour sepsis treatment is delayed, the risk of death increases 7.6%. In just seconds, the sterile, disposable Centurion Compass provides a precise and quantifiable measurement of CVP. It is ideal for assessing a septic patient quickly and confirming your decision on the best treatment pathway.

Eliminate the guesswork and untangle the complexity of sepsis management.

Sepsis management made simple

In just seconds, the sterile, disposable Compass can provide a precise, quantifiable and objective measurement of CVP. Insert the central line, connect the Compass and immediately read the CVP. No waiting for staff to hassle with overhead monitors, calibration, levelling or priming.

With Compass in place, a patient's CVP is not only measured instantly but monitored periodically as needed.

**Good for you, great for your patients:
Compass, Precise Pressure Made Simple**

Product features

- Allows measurement of CVP after insertion of a central line and as needed thereafter
- Sets up in seconds with no cables or external monitors needed
- Can be rapidly integrated because training is simple and intuitive
