NasoGastric Securement

**2 adhesive
zones for superior
securement**

Benefits for caregivers, hospitals and patients

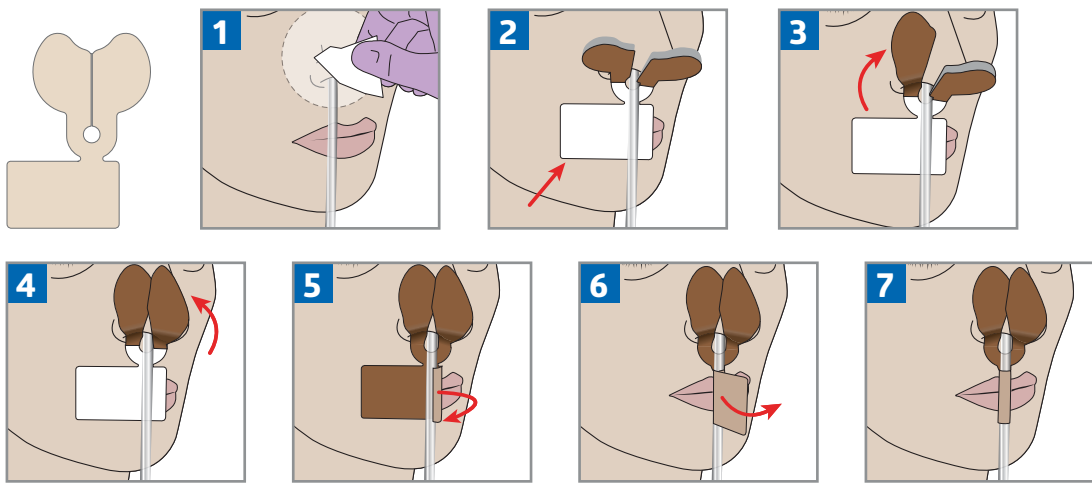

- 2 sets of strategically placed adhesive zones conform to the patient's nose and tube, which reduces bunching and provides strong securement, lowering the risk of extubation
- Positioning the securement behind the tube provides the caregiver a clear view of the tube, allowing for more accurate placement
- Patient-friendly adhesive leaves very little residue on patient's skin; the adhesive is also latex-free, non-sensitising and very easy to apply and remove
- Universally designed to secure all types of nasal feeding tubes and sump tubes
- Costs less and is less messy than pink tape

Designed to secure all types of nasal feeding and sump tubes, Centurion's NasoGastric Tube Securement Device is skin-friendly and easy to apply, and is designed with two adhesive zones (one secures to the nose while the other secures the tube) to reduce bunching and risk of extubation while improving dwell time.
