

Surgical Gloves: Our Story

Medline is more than a surgical glove provider. We are your partner.

As a manufacturer of thousands of products, we can help you improve clinical outcomes while maximising your total value. Why look at Medline surgical gloves? **Selection, quality, customer focus, and unique product features** are just a few of the benefits we have to offer.

The next evolution: PI, PI Micro, PI Green

Using data gathered from Medline's Custom Fitting App, measuring the hands of thousands of surgeons and staff around the world, we've developed our new and improved Medline hand mould, to help enhance comfort and reduce hand fatigue. Our goals are to improve comfort, help reduce hand fatigue, and optimally fit the overwhelming majority of surgeons and staff.

The first series of gloves on our new and improved Medline hand mould is our SensiCare® PI line. Made of Isolex, SensiCare® PI has improved elasticity with a soft surface. This helps with taking pressure off the hand and providing a comfortable latex-free feel. The diverse options in this line provide a latex-free solution for every clinician.

SensiCare® PI

As the original glove on our new and improved Medline hand mould, it has become the preferred choice for many healthcare professionals.

SensiCare® PI Micro

The enhanced tactile sensitivity of this glove makes it a great option for neurological, vascular and cardiological surgeries, and double gloving. It provides the same fit and comfort as SensiCare® PI but is our thinnest polyisoprene glove.

SensiCare® PI Green

This is the ideal latex-free underglove, with its dark-green colour to indicate overglove perforations. It has the perfect grip to balance ease of donning and reduce slipping between glove layers, and uses Aloetouch® technology to moisturise the hands.

The need for choice

We understand that surgeons and staff have specific preferences when it comes to surgical gloves. In recognition, Medline offers the **most comprehensive line of surgical gloves** with a variety of former, colour, texture and thickness options.

The need for niche products

Within our product portfolio are a few niche items that make **Medline the only one-stop shop for all surgical glove needs.**

DermAssure™ Green

Skin sensitivities are on the rise and Medline recognises the need to provide a safe option for those affected by these sensitivities. DermAssure™ Green is Medline's first surgical glove that is without chemical accelerators. The dark-green colour and unique polymer coating also make DermAssure™ Green an ideal underglove. From skin sensitivities to double gloving, this is a glove that promotes safety amongst your entire operating theatre staff.

Signature Latex Green and SensiCare® PI Green

While some people's skin is sensitive to chemical accelerators, others' gets damaged by the daily wear and tear of their healthcare profession. Things like constant hand washing, sanitising hands with strong chemicals, and wearing gloves, can lead to dry, cracked hands. Therefore, Medline came up with a solution to (and prevention method for) this problem—Aloetouch® technology, which puts a layer of freeze-dried organic aloe vera inside the glove. This helps to moisturise the skin, leaving healthcare professionals with soft, smooth hands. Signature Latex Green and SensiCare® PI Green utilise this technology and also make great undergloves due to their dark colours.

SensiCare® PI Evolution

Facilities are always looking for an economical latex-free surgical glove option. At Medline, we understand the need for an affordable latex-free surgical glove that is clinically acceptable for use in operating theatres. SensiCare® PI Evolution is a blended latex-free surgical glove. The polyisoprene/polychloroprene blend helps keep costs down while giving the fit, feel and performance of a PI glove. These features, combined with its unique polymer coating, also make SensiCare® PI Evolution an ideal overglove when double gloving.

Latex-free options

- **SensiCare® Neoprene**
Standard polychloroprene
- **SensiCare® PI Evolution**
PI blend
- **SensiCare® PI**
The performance of latex without proteins
- **SensiCare® PI Micro**
