

# Protect Staff's Skin from Abrasion, Damage and Injury

Wearing protective equipment for long periods puts healthcare workers' skin at risk. Here are **3 smart ways** to help reduce excessive moisture or friction, which can lead to moisture-associated skin damage (MASD) and/or medical device-related pressure injuries (MDRPI).

## Marathon Liquid Skin Protectant

- Can be used on the face to protect the skin from abrasion, friction and shear
- Bonds to skin to remain in place and naturally sloughs away to retain skin integrity
- Helps protect skin from damage due to perspiration under surgical masks

## SurePrep No-sting Skin Protectant

- Provides a transparent waterproof barrier on the skin
- Protects from body fluids and adhesive stripping by creating a barrier film
- Allows skin to breathe due to fast-drying and vapour-permeable properties
- Alcohol- and solvent-free; suitable for delicate skin like the face

## Remedy Moisturising Barrier Cream

- Moisturises, nourishes and protects skin
- Helps reduce the appearance of red, cracked, scaly skin
- Available in 30 ml and 118 ml tubes; safe way to moisturise and nourish caregivers' skin

## Product ordering information

Tools to help clinicians reduce abrasion or moisture management related to MDRPIs

### Marathon Liquid Skin Protectant

Item number	NHS	Description	Packaging
MSC093001	ELY560	Liquid Skin Protectant	5 each/box
